Learn how setting up a Supervisor in 4.6 just got easier with the System Database Service

The release of Tridium's Niagara 4.6 introduced the ability for a Niagara Supervisor to examine all the Niagara devices in the Niagara Network and pull up Entity data (tags and relations) into a new System Database. During this TridiumTalk, a high level view will be provided of the System Database feature including setup and configuration of the system indexer.

Learn how Entity data in remote stations will be available at the Supervisor upon executing a System Index. System level hierarchies and search can also utilize this remote Entity data. Finally, learn about the enhancements to Niagara Virtual components, including new virtual schedule HTML5 views. This new view could eliminate the need for master schedules in the Supervisor.

Be sure to register today to attend the TridiumTalk on how to use the System Database feature using the latest version of Niagara.

Date
November 8, 2018

Time
11:00 a.m. Eastern Time
(New York, UTC-05:00)
